

CLEAF

Thermo Structured Surface

CLEAF

Origin An Italian product, produced in Lissone, Italy in the heart of the Milano design community

Profile The leaders in innovation and technology of designer decors and textures for the global interior design and furniture building industries

History **CLEAF** revolutionized the decorative panel industry by focusing 100% of their effort on developing the most durable and beautiful, life-like textures. Flexible and reactive to market trends, **CLEAF** is always leading with multiple new texture releases per year.

The **CLEAF** difference...

TSS

Thermo Structured Surface (TSS) boards are made with decorative and kraft papers, treated with resins under heat and pressure to become part of the panel itself

Kraft Paper

TSS panels are produced with up to four layers of kraft paper below the decorative surface offering a deeper texture and a significantly more durable finish

Consistency

Applying texture through a direct press (as opposed to release papers) combined with a Class B dry heat rating for distortion of colour, **CLEAF** guarantees the quality of the finished product long after installation

Performance

Every board is CARB 2 and complies with Canadian production standards. **CLEAF's** board has been optimized to minimize chipping and deliver an elegant finish

Product

The press delivers 100 lbs/cm² (4 x more than melamine); the heat, pressure and additional kraft papers align **CLEAF** closer to laminated HPL than a melamine surface with impact, scratch and wear resistance

CLEAF is a standalone product in the interior design and furniture building industry - there's nothing quite like it. Although many products might seem similar, up close, **CLEAF** outperforms every melamine on the market in durability, longevity and overall performance. As for the design, **CLEAF** is a global leader with over 70 textures, 40,000 finished products and was recently displayed in over 100 booths at Salone de Mobile, Eurocucina.
