

High Gloss and Super Matte Panel Cleaning Guide

PREMLINE'S *DIALUX High Gloss* panels are exposed to a variety of assessments to ensure not only their durability, but adaptable resilience in any environment your *DIALUX panels* are applied in.

PREMLINE's patented PET technology allows it to have the highest quality reflection, while maintaining its durability that stands up to everyday use. PREMLINE's product is beautifully clear and reflective, yet equally as durable.

⇒ *Day-to-Day Maintenance:*

Cleaning is simple with PREMLINE's PET finish, warm water and a streak-free cloth will suffice.

⇒ *Everyday Spills:*

High stain-resistance to everyday spills, i.e.: coffee, juice, red wine, tomato sauce, warm water and a streak-free cloth will suffice. Commercial cleaning products that adhere to the following specifications will work as well:

- Alcohol content of 90%-proof or less
- Acetone-based cleaners
- Nitro Diluent cleaners

Weston Premium Woods recommends Windex, Lysol Wipes, or comparable products. Under no circumstance should you ever scrape away, use sharp objects, or use abrasive cleaning pads on *PREMLINE* panels, as it could scratch the PET. It is recommended to always start with warm water and a cloth for simple stains.

In the event of a severe stain, please use the recommended cleaning solutions stated below:

Type	Recommended Removal
Drawing Markers	Warm Water/Rubbing Alcohol 90%
Permanent Markers	Rubbing Alcohol 90%
Regular Glue	Acetone
Nail Polish	Acetone
Spray Paint	Acetone/ Nitro Diluent

Please note that prolonged exposure to acid based cleaning solutions can cause discoloration.
